

Gift Planner

Final Project Design System v2

Flutter-ready visual and implementation guide based on the revised Gift Planner proposal and the eight-screen mockup.

	Primary #6D4CC2
	Secondary #9B7AD6
	Accent #F3A8C8
	Background #FFF7FA
	Surface #FFFFFF
	Error #C94F6D
	Success #54BFA5

Theme decision

Light only for the MVP. The current screens are designed around a bright pastel surface system. Keeping one scheme reduces MVP scope; a dark ColorScheme can be added later if it becomes a requirement.

Design direction: friendly, soft, organized, and easy to scan. Purple carries primary actions; pink adds warmth; white surfaces keep forms and cards clear.

1. Color System — Flutter ColorScheme

Use these named roles instead of hard-coded colors inside individual widgets.

Role	Hex	Flutter role	Use
Primary	#6D4CC2	colorScheme.primary	Main buttons, active navigation, key actions
On Primary	#FFFFFF	colorScheme.onPrimary	Text/icons on primary controls
Secondary	#9B7AD6	colorScheme.secondary	Secondary actions
Accent	#F3A8C8	colorScheme.tertiary	Warm highlights and tags
Background	#FFF7FA	colorScheme.surface	Main page background
Surface	#FFFFFF	colorScheme.surfaceContainerLowest	Cards and forms
Text	#211B3A	colorScheme.onSurface	Body text and headings
Muted	#655D78	colorScheme.onSurfaceVariant	Hints and captions
Error	#C94F6D	colorScheme.error	Validation/destructive states
Success	#54BFA5	semantic success	Completed/paid indicators

Contrast check

Body text #211B3A on #FFF7FA: **15.54:1**. White on primary #6D4CC2: **6.06:1**. Both provide strong readable contrast.

Flutter ColorScheme starter

```
final lightScheme = ColorScheme(  
  brightness: Brightness.light,  
  primary: Color(0xFF6D4CC2),  
  onPrimary: Colors.white,  
  secondary: Color(0xFF9B7AD6),  
  onSecondary: Colors.white,  
  tertiary: Color(0xFFF3A8C8),  
  onTertiary: Color(0xFF211B3A),  
  surface: Color(0xFFF7FA),  
  onSurface: Color(0xFF211B3A),  
  onSurfaceVariant: Color(0xFF655D78),  
  error: Color(0xFFC94F6D),  
  onError: Colors.white,  
);
```

2. Type Scale & Spacing

Screens use named TextTheme slots rather than inline font sizes.

Style	Flutter slot	Size	Weight	Use
Screen title	headlineSmall	24 sp	Bold	Screen titles / dashboard greeting
Section heading	titleMedium	16 sp	Bold	Upcoming Occasions, Gift Plans
Body	bodyMedium	14 sp	Regular	Forms, lists, descriptions
Caption	bodySmall	12 sp	Regular	Dates, hints, small labels

TextTheme

```
textTheme: const TextTheme(  
  headlineSmall: TextStyle(fontSize: 24, fontWeight: FontWeight.w700),  
  titleMedium: TextStyle(fontSize: 16, fontWeight: FontWeight.w700),  
  bodyMedium: TextStyle(fontSize: 14),  
  bodySmall: TextStyle(fontSize: 12),  
),
```

Named spacing constants

space8	8 px	Related content, icon/text gaps
space16	16 px	Screen edge padding and normal gaps
space24	24 px	Between major sections
space32	32 px	Large visual separation

Default rule: 16 px screen padding, 8 px inside related content, 24 px between major sections.

3. Reusable Components

A component is listed only when its constructor parameters can be named and it appears on more than one screen.

Component	File path	Constructor parameters	Used on
AppTopBar	lib/widgets/app_top_bar.dart	title, showBack, onBack, actionIcon, onAction	Most screens
PrimaryButton	lib/widgets/primary_button.dart	label, onPressed, icon, isLoading	Auth + forms
AppTextField	lib/widgets/app_text_field.dart	controller, label, hint, prefixIcon, obscureText, validator, keyboardType	Auth + forms
StatusChip	lib/widgets/status_chip.dart	label, status	Dashboard, Gift Plan, History
RecipientCard	lib/widgets/recipient_card.dart	recipient, onTap, onDelete	Dashboard, Recipient List
OccasionCard	lib/widgets/occasion_card.dart	occasion, recipientName, daysUntil, onTap	Dashboard, Recipient Details
GiftPlanCard	lib/widgets/gift_plan_card.dart	giftPlan, showProgress, onTap	Dashboard, Recipient Details, History
BudgetProgress	lib/widgets/budget_progress.dart	budget, spent, showValues	Dashboard, Gift Plan, History
AppSearchBar	lib/widgets/app_search_bar.dart	controller, hint, onChanged, onFilter	Recipient List, History
BottomNavBar	lib/widgets/app_bottom_nav.dart	currentIndex, onDestinationSelected	Dashboard + main flow
SectionHeader	lib/widgets/section_header.dart	title, actionLabel, onAction	Dashboard, Recipient Details

4. Screen-to-Component Map

Screen	Purpose	Main components
1. Login / Registration	Sign in or create account.	AppTextField, PrimaryButton
2. Dashboard	Upcoming occasions and gift plans needing attention.	AppTopBar, OccasionCard, GiftPlanCard, BudgetProgress, SectionHeader,
3. Recipient List	Search, browse, edit or delete recipients.	AppTopBar, AppSearchBar, RecipientCard, BottomNavBar
4. Add/Edit Recipient	Create or update recipient information.	AppTopBar, AppTextField, PrimaryButton
5. Recipient Details	Recipient plus related occasions and gift plans.	AppTopBar, SectionHeader, OccasionCard, GiftPlanCard
6. Occasion Screen	Add or edit birthday/special occasion.	AppTopBar, AppTextField, PrimaryButton
7. Gift Plan Screen	Create/update gift, budget, spending and status.	AppTopBar, AppTextField, StatusChip, BudgetProgress, PrimaryButton
8. Gift Planning History	Review previous gift plans and spending.	AppTopBar, AppSearchBar, StatusChip, GiftPlanCard, BottomNavBar

Example content from the mockup

Maria Santos • Best Friend • Books, Makeup, Coffee • Birthday: Oct 12, 2025 • Kindle Paperwhite • Budget: ■8,000 • Spent: ■6,999 • Status: Planned.

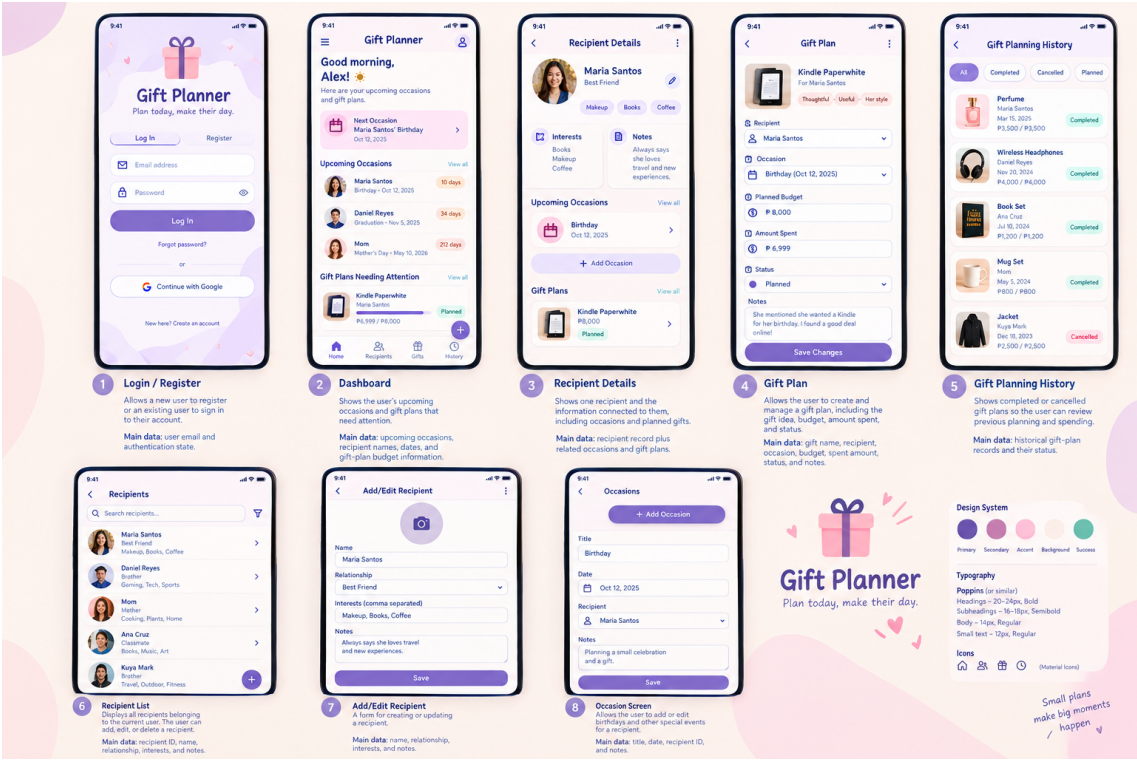

Figure 1. Eight-screen Gift Planner mockup used to define the design system.

5. Day-One Flutter Structure

This keeps theme values, reusable widgets, screens, models and Supabase services separate.

```
lib/  
main.dart  
theme/  
app_theme.dart  
app_colors.dart  
app_spacing.dart  
models/  
recipient.dart  
occasion.dart  
gift_plan.dart  
widgets/  
app_top_bar.dart  
primary_button.dart  
app_text_field.dart  
status_chip.dart  
recipient_card.dart  
occasion_card.dart  
gift_plan_card.dart  
budget_progress.dart  
app_search_bar.dart  
app_bottom_nav.dart  
section_header.dart  
screens/  
auth/login_screen.dart  
auth/register_screen.dart  
dashboard/dashboard_screen.dart  
recipients/recipient_list_screen.dart  
recipients/add_edit_recipient_screen.dart  
recipients/recipient_details_screen.dart  
occasions/occasion_screen.dart  
gifts/gift_plan_screen.dart  
history/gift_history_screen.dart  
services/  
auth_service.dart  
recipient_service.dart  
occasion_service.dart  
gift_plan_service.dart
```

Theme starter

```
ThemeData(  
  useMaterial3: true,  
  colorScheme: lightScheme,  
  scaffoldBackgroundColor: lightScheme.surface,  
  textTheme: const TextTheme(  
    headlineSmall: TextStyle(fontSize: 24, fontWeight: FontWeight.w700),  
    titleMedium: TextStyle(fontSize: 16, fontWeight: FontWeight.w700),  
    bodyMedium: TextStyle(fontSize: 14),  
    bodySmall: TextStyle(fontSize: 12),  
  ),  
);
```

6. What Changed, and Why

Change	Why / what confirmed it
React + Node + Express + MySQL → Flutter + Supabase	The revised proposal changed the implementation stack to Flutter with Supabase Authentication and PostgreSQL persistence.
AI gift suggestions moved to stretch	The MVP was narrowed so the core recipient, occasion, gift-plan and history flow stays achievable.
Light-only theme	The mockup is consistently light and pastel; one scheme keeps the MVP smaller and avoids an unnecessary dark-theme retrofit.
Palette formalized as ColorScheme	The mockup established the visual direction; this document turns those choices into named Flutter roles and real hex values.
Four named text styles	Repeated titles, section headings, body copy and captions are now mapped to TextTheme slots instead of random inline sizes.
Reusable cards and form controls	The eight screens repeatedly use cards, fields, buttons, chips, progress and navigation, so they are now explicit buildable components.
Eight screens documented	The revised proposal names Login/Registration, Dashboard, Recipient List, Add/Edit Recipient, Recipient Details, Occasion, and Gift Plan.
Spacing standardized	8/16/24/32 px constants make screen padding and gaps consistent across all screens.

Implementation checklist

- Use ColorScheme roles for app colors.
- Use TextTheme names instead of inline font sizes.
- Use space8, space16, space24 and space32 constants.
- Build shared widgets before duplicating UI code.
- Keep the screen-to-component map synchronized when screens change.
- Keep Supabase records scoped by authenticated user_id and protected with row-level security.
